

FUND OBJECTIVE & STRATEGY

The ClucasGray Equilibrium Prescient Fund is a Regulation 28 compliant, multi-asset high equity fund. The Fund aims to provide long term capital growth ahead of its peer group by delivering both income and capital growth in excess of inflation over time. The Fund aims to achieve these objectives through an active approach to asset allocation, and via superior stock selection. Fundamental analysis, a valuation discipline and a belief that inefficient markets create opportunities in mispriced assets underpin both our asset allocation and stock selection process.

FUND INFORMATION

Portfolio Managers:	Andrew Vintcent & Grant Morris
Inception Date:	16 January 2015
Fund Size:	R861 million
Unit Price:	144.83 cents
ASISA Category:	South African Multi-Asset High Equity

WHO SHOULD INVEST

The fund is an ideal wealth creation vehicle for investors with a medium to long-term investment horizon.

RISK INDICATOR

These funds typically exhibit more volatility given their higher exposure to equities and offshore markets where currency fluctuations may result in capital losses. Expected potential long term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

NET PERFORMANCE (ANNUALISED) AT 31 JANUARY 2020

	1-Year	3-Year	5-Year	Since Inception
Fund*	5.7%	6.4%	6.9%	7.6%

Peer Group	8.7%	4.4%	4.4%	4.8%

ROLLING 12 MONTH RETURN

	Highest	Average	Lowest
Fund Class C	12.8%	6.2%	-2.4%

* Fund performance is the net weighted average fee return for the fund

** Highest Fee Class

*** Class B2 Inception 31 May 2017

MONTHLY COMMENTARY

January proved to be a tough start for the year for local equity investors, with the JSE declining in the month. The arrival of the Coronavirus was met with a flight to safety, and owing to concerns around its impact on short term growth, weakening of select key commodity prices, and a sell-off in Emerging Market currencies - the Rand lost 7% in the month. Resources and Financials both declined over 3.5% in the month. Notwithstanding the weak currency, the all bond index gained in the month - the yields on South African bonds, as alluded to in the January 2020 quarterly, are elevated in a global context. We are encouraged by their resilience in the face of tremendous economic headwinds.

We articulated in some detail our views in the January 2020 quarterly, and how these have informed the portfolio positioning. Please find a copy of the quarterly at www.cgam.co.za.

FEE STRUCTURE

TER	Class C	Class B2

Last Distribution	1.92 cents per unit

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. A list of fund specific risks is provided below. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
