

FUND OBJECTIVE & STRATEGY

The ClucasGray Global Flexible Prescient Fund aims to provide medium to long-term capital and income growth over time by investing in a flexible portfolio of global asset classes and currencies. The Fund will invest in a diversified mix of global assets, including equities, bonds, property, preference shares, debentures, fixed interest securities and money market instruments. The Fund will employ asset and geographical allocations to reflect changing economic and market conditions to maximise returns over the long term.

	Highest	Average	Lowest
Fund Class B1	7.8%	1.6%	-3.8%

* Fund performance is the net weighted average fee return for the fund

** Highest Fee Class

WHO SHOULD INVEST

The fund is an ideal wealth creation vehicle for investors with a medium to long-term investment horizon.

RISK INDICATOR

These funds typically exhibit more volatility given their higher exposure to equities and offshore markets where currency fluctuations may result in capital losses. Expected potential long term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

QUARTERLY COMMENTARY

Rising bond yields, in anticipation of an inflation pick up (with the US 10Y now at 1.75% compared to as low as 0.50% during 2020) and a continued move out of high growth technology stocks into cyclical value-orientated stocks directed market movement during the first quarter of 2021.

Equity markets continue to perform strongly, following US President Joe Biden signing off on its \$1.9tn "US Rescue Stimulus Package" which represents 9% of annual GDP. The start of the global vaccination programme in which more than 35% of USA adults and almost 65% of UK adults have already received their first vaccine also provided a strong underpin for markets. Business sentiment improved during the first quarter and we are seeing an uptick in manufacturing and service numbers across Europe and the USA. Developed Markets (S&P 500: +6.2% and MSCI EU: +8.4%) outperformed Emerging Markets (MSCI EM: +2.6%) during Q1, but this was related to a surge in Covid infections across India and Brazil, which spilled over into the wider emerging market basket. Global equities (MSCI World: +4.9%) outperformed fixed income (Bloomberg Global Bond Index: -4.4%) as investors continue to seek real returns.

Material changes we implemented during the first quarter include three new positions namely: 3M, O'Reilly Automotive and Kering. All three holdings meet our key investment criteria. 3M and O'Reilly Automotive are well positioned to benefit from an ongoing cyclical recovery in the US whilst Kering will be one of biggest benefactors from the resumption of cross border travel. We also decided to exit our position in VMWare and redirect the funds to other higher conviction tech plays. Furthermore, we have started to reduce our direct banking exposure following stellar performance in both Citigroup and JPMorgan and redeploy the capital into the broader financial sector. From an asset allocation point of view, we have increased our exposure to equity from 63.8% as at the end of 2020 to 69.7%, following additional monetary stimulus that has been announced, economies opening up and upwardly revised economic growth rates globally. The was mainly funded through our foreign cash holdings, which decreased from 16.2% to 10.1%. We have maintained our level of exposure to fixed income, property and local cash.

Since inception the portfolio has delivered returns in excess of CPI and GDP growth, thereby meeting its stated objective of long-term capital growth whilst maintaining a prudent risk adjusted approach in allocating capital.

The top performing shares during the first quarter were Tractor Supply Co (+25.9%), eBay (+21.8%), and JPMorgan Chase (+19.8%) with the biggest detractors being Apple (-7.9%), Unilever (-7.6%) and Amazon (-5.0%).

The current asset allocation of the ClucasGray Global Flexible Prescient Fund is as follows:

Fund Asset Allocation	Q4 2020	Q1 2021
Foreign Equity	64%	70%
Foreign Cash	16%	10%
Foreign Fixed Income	12%	13%
Foreign Property	3%	3%
Cash	5%	5%

The number of participatory units as of 31 March 2021 was 131 866 584.

FEE STRUCTURE

TER	Class B1
Annual Management Fee (excl. VAT)	0.90%

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. A list of fund specific risks is provided below. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
