

FUND OBJECTIVE & STRATEGY

The ClucasGray Equity Prescient Fund is a SA only, general equity fund. The Fund aims to provide long term capital growth ahead of its benchmark (SWIX) and the competing unit trust category by investing in any shares that are listed on the JSE. The Fund is a high conviction fund aiming to hold no more than 25 stocks at any one time. Fundamental analysis, a valuation discipline and a belief that inefficient markets create opportunities in mispriced assets underpin our process.

FUND INFORMATION

Portfolio Managers:	Andrew Vintcent & Grant Morris
Inception Date:	01 October 2011
Fund Size:	R624 million
Unit Price:	208.34 cents
ASISA Category:	South African Equity General
Benchmark:	SWIX Total Return
Min Lump Sum:	R20 000
Min monthly investment:	R1 000
Issue Date:	07 June 2021

WHO SHOULD INVEST

The Fund is suitable for long-term investors seeking high levels of investment growth who can tolerate the associated levels of capital volatility.

RISK INDICATOR

These funds typically exhibit more volatility given their higher exposure to equities which may result in capital losses. Expected potential long-term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

MONTHLY COMMENTARY

The powerful global equity rally off the 2020 Covid crisis lows has continued into 2021, with the MSCI World Index having gained 11% year to date. During the period under review, the Fund has adhered to its policy objective. The ClucasGray Equity Prescient Fund has enjoyed a strong quarter, gaining 13.2%, outperforming both the JSE Swix (+4.2%) and the General Equity peer group (+5.6%). The Fund is now up over 29% in the last 6 months, and 47% over the last year, in both cases well ahead of the Swix and peers. The Fund had a particularly strong month, gaining 6.7% in May.

Whilst the drivers of quarterly performance have been broad based, a number of companies performed well for the Fund – most notably Distell, Massmart and Sabvest which gained over 40%. In addition MTN, Pepkor, Long4Life, Absa and Motus all had a very strong quarter, gaining over 18%. There were some larger companies and sectors which struggled in the quarter. Most notably both Naspers and Prosus declined over 13%, and some of the larger Resource companies which have for some time been the drivers of the JSE returns, had a relatively weaker quarter.

At one stage in January the Fund had four resources companies in the top ten holdings, but given the extraordinary performance, and potentially elevated risks building with respect to the underlying commodity price environment, only Anglos remains in the top ten. Over the last while, we exited our holding in Billiton, Amplats and Mr Price, and reduced weightings in a number of other companies, following a very strong rally in their share prices. We redirected the proceeds into adding to existing weightings in companies where we think the potential exists for outsized returns from current levels.

There have been many times over the years when our portfolios have looked different to both peers and the indices - this is not by design, but by leveraging off our investment process, and by looking for underexplored opportunities and mispriced assets across the market cap spectrum, a natural consequence could well be portfolios that look different. It is an approach that has served our clients well **over time**, but perhaps not **all the time**.

The ClucasGray Equity Prescient Fund was launched in October 2011. As highlighted on the fact sheets, the Fund has outperformed the general equity peer group over most periods since inception. The Fund has delivered a compound annual net return of 11.2% over 9% years, versus the peer group return of 9.2%. In addition, the fact sheet also illustrates how the long term performance gap between the fund and its official benchmark, the JSE Swix, has been narrowed dramatically over the last year.

This is an ever evolving and dynamic industry, and while we have been encouraged by the rebound in performance from the lows of 2020, we know that much work remains to be done. Given the opportunity set that has currently been presented to South African investors, the current composition of the Fund and our view of prospective returns, we believe that the Fund is well placed to continue to deliver on its investment objectives.

We encourage you to read our April 2021 Quarterly Commentary available on our website www.cgam.co.za for more detail on our current thoughts and portfolio positioning.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. A list of fund specific risks is provided below. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
