

FUND OBJECTIVE & STRATEGY

The ClucasGray Global Flexible Prescient Fund aims to provide medium to long-term capital and income growth over time by investing in a flexible portfolio of global asset classes and currencies. The Fund will invest in a diversified mix of global assets, including equities, bonds, property, preference shares, debentures, fixed interest securities and money market instruments. The Fund will employ asset and geographical allocations to reflect changing economic and market conditions to maximise returns over the long term.

	Highest	Average	Lowest
Fund Class B1	9.1%	4.4%	-3.1%

* Fund performance is the net weighted average fee return for the fund

** Highest Fee Class

WHO SHOULD INVEST

The Fund is an ideal wealth creation vehicle for investors with a medium to long-term investment horizon.

RISK INDICATOR

These funds typically exhibit more volatility given their higher exposure to equities and offshore markets where currency fluctuations may result in capital losses. Expected potential long term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

MONTHLY COMMENTARY

Global equity markets reached new all-time highs as vaccination rollouts gain momentum and economies continue to open up. Recent strength in markets could also be attributed to a continued decline in the US 10-year bond yield, dipping below the 1.2% level, with growth stocks benefitting the most. This potentially reflects a less than optimistic outlook for medium term growth as inflation concerns continue to linger. Developed markets (+1.8%) outperformed emerging markets (-6.7%) during July as Asian markets sold off following increased regulatory tightening in China.

All three major USA indices reached new all-time highs during July, despite a steady increase in reported covid cases. The key issue during the month revolved around the continued decline in the yield curve and whether this is a supply / demand issue or an expectation of slowing growth. The Fed did indicate during its July meeting that tapering of asset purchases is moving closer, either towards the end of this year or early next year. Inflation surprised to the upside for the 4th consecutive month, with headline CPI measuring 5.4% measured YoY. Further evidence of the strength in the US economy was evident in reported non-farm payroll numbers which increased by 850 000 for the month of June, the largest increase in almost a year. In Europe, the European Central Bank (ECB) released details of their strategic review, in which they adjusted their inflation target to 2% from "below, but close to 2%" previously. Additional positive news included strong PMI data with business activity growing at its fastest pace in 21 years with strong expansion in the service sector.

As mentioned, emerging markets moved sharply lower following a series of regulatory changes in China. It started with the fintech sector towards the end of 2020 and has subsequently moved into data collection, monopolistic and anti-competitive behaviour and finally drastic changes in the private education sector. The concern market participants now face is which sector or area could potentially be targeted next. Our direct exposure to China is limited to Alibaba and Prosus via Tencent, two holdings we believe are both trading below their intrinsic value currently.

The top performing shares during the month were Alphabet (+10.4%), Pfizer (+9.3%), and BHP (+9.1%) with the biggest detractors being Alibaba (-13.9%), Prosus (-9.2%) and Citigroup (-4.4%).

FEE STRUCTURE

TER	Class B1
Annual Management Fee (excl. VAT)	0.90%
Other Cost	0.42%
VAT	0.13%

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. A list of fund specific risks is provided below. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
