

FUND OBJECTIVE & STRATEGY

The ClucasGray Future Titans Prescient Fund has a flexible mandate to invest in a range of asset classes but will typically have high exposure to companies outside of the Top 40 Index. The fund is permitted to invest 25% offshore plus an additional 5% in Africa. The primary objective of the fund is to achieve real long-term capital growth ahead of CPI + 6%. The fund looks to acquire fast growing, mispriced, mid-and small-cap shares, "Future Titans", on the back of high conviction fundamental investment calls. The fund has a deep value / activist bias.

FUND INFORMATION

Portfolio Managers:	Brendon Hubbard, James Clucas
Inception Date:	01 September 2009
Fund Size:	R144.2 million
Unit Price:	291 cents
ASISA Category:	South African - Multi Asset - Flexible
Benchmark:	CPI Upper Limit
Min Lump Sum:	R20 000
Min monthly investment:	R1 000
Issue Date:	09 November 2021

WHO SHOULD INVEST

The fund is a high risk, high return fund and should be invested in as a complementary investment to any long-term blue-chip portfolio.

RISK INDICATOR

These funds typically exhibit more volatility given their higher exposure to equities and offshore markets where currency fluctuations may result in capital losses. Expected potential long term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

Lowest rolling 1-year return*	-27.1%	6.0%	-13.2%

*Since inception

MONTHLY COMMENTARY

The ClucasGray Future Titans Prescient Fund had a superb month outperforming the market significantly as several of our holdings started to reflect the underlying fundamentals we have long discussed. Long 4 Life in particular had a strong month after releasing a cautionary.

There is potentially a c.R50bn revenue opportunity with the failing monopoly operator running at 40%+ EBITDA margins about to be opened to the private sector. This opportunity comes about as Transnet's rail volumes have been decimated, driven by a massively inflated supply of Chinese locomotives to Transnet. Only a few years into the contract a politically-driven management change at Transnet alerted National Treasury, SARS and SIU to the massive fraud which resulted in payment to the Chinese being stopped. The net result is that the Chinese manufacturer will not supply spare parts when the locos breakdown, which apparently happens quite often. This has had massive implications for the bulk commodity miners such as Exxaro, Thungela, Glencore, ARM etc who need to move these commodities to the port. If you have little or no rail capacity, your mine is worth very little. The glimmer of hope lies in rail reform whereby private operators run trains on Transnet's infrastructure and pay toll fees in the same way that private truckers run on Sanral roads. This process has strong political backing with white papers having been published and it is a priority project in President Cyril Ramaphosa's Operation Vulindlela as part of the Economic Reconstruction & Recovery Plan. Private sector participation will be limited by balance sheet strength (to move 10mt will require c.R5bn worth of train sets) and legislative skills (much like those required to run an airline). In addition, the delivery of new train sets will take as long as 18 months from General Electric, for example. There is, however, one party with enough train sets to move 10mt - the locos are carried at R150m in the balance sheet but to a mining house they are priceless - and that is Grindrod. The rail business has been a relative underperforming division for years, but this could soon change, having had experience in operating trains in the DRC, Zambia, Zimbabwe and Sierra Leone - territories with rail infrastructure in significantly worse condition than Transnet's infrastructure. It is going to be an interesting few months ahead!

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs(TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.
