

FUND OBJECTIVE & STRATEGY

The ClucasGray Equilibrium Prescient Fund is a Regulation 28 compliant, multi-asset high equity fund. The Fund aims to provide long term capital growth ahead of its peer group by delivering both income and capital growth in excess of inflation over time. The Fund aims to achieve these objectives through an active approach to asset allocation, and via superior stock selection. Fundamental analysis, a valuation discipline and a belief that inefficient markets create opportunities in mispriced assets underpin both our asset allocation and stock selection process.

FUND INFORMATION

Portfolio Managers:	Andrew Vintcent & Grant Morris
Inception Date:	16 January 2015
Fund Size:	R1145 million
Unit Price:	141.28 cents
ASISA Category:	South African Multi-Asset High Equity
Benchmark:	Market value-weighted average return of ASISA category
Min Lump Sum:	R20 000
Min Monthly Investment:	R1 000
Issue Date:	04 May 2022
ISIN:	ZAE000243838

WHO SHOULD INVEST

The Fund is an ideal wealth creation vehicle for investors with a medium to long-term investment horizon.

RISK INDICATOR

These funds typically exhibit more volatility given their higher exposure to equities and offshore markets where currency fluctuations may result in capital losses. Expected potential long term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

QUARTERLY COMMENTARY | MARCH 2022

The 1st quarter of 2022 will forever be defined by the outbreak of War in Eastern Europe. We, like most, have been deeply disturbed by developments in Ukraine. Our thoughts and prayers extend to all those directly impacted by the acts of significant aggression that have taken place over - there is no place for unilateral aggression. The Western World's response to Russia has been uniform, swift, and economically brutal.

The asset allocation decision to hold materially more in South African equities, and historically low levels in offshore equity proved to be a good one in the quarter. Aside from the currency strength, which we discuss later in more detail, the MSCI World Index declined over 5% in Dollars, while the JSE Capped Swix gained over 6% in Rands. Over the last year, the JSE Capped Swix has returned 29% in Dollars, compared to around 7% for the MSCI World Index. The ClucasGray Asset Management asset allocation process had for some time been highlighting the relative attractiveness of local equities - notwithstanding the relative outperformance referred to above, the reality is that our assessment of prospective returns continues to favor South African equity.

The JSE Capped Swix gained over 6%, but it was the divergence of returns that made the 1st quarter of 2022 such a remarkable one. The ClucasGray Equilibrium Prescient Fund has been well exposed to both Resources and Banks for some time, and it was pleasing to see many of the large weightings in both sectors perform well. Some notable performances in the quarter include Exxaro, African Rainbow, Standard Bank, Absa and Grindrod all gaining over 25%. In addition, key holdings such as Anglos, Glencore, Ethos Capital and MTN all gained over 10%.

Countering the above, the JSE was severely impacted by the significant collapse in both Naspers & Prosus, which fell 33% & 39% respectively. The Fund owns some in each, but the weightings were relatively modest. Our view on Naspers is that they have some obvious levers to pull to, at the very least, unwind a meaningful portion of the discount to our estimate of their sum of the parts. It may require some humble pie from the executives, but it is now clear that the much maligned structure they created in 2021 has underwhelmed.

Away from the above, the Fund was impacted by a weak performance from Massmart, Reunert, Ninety One and Astral which all fell more than 12% in the quarter.

The All Bond Index gained 1.9% in the quarter - it remains an asset class that we believe offers an attractive prospective return, and whilst the annualized returns in the 1st quarter are comfortably ahead of cash, they are nonetheless a little disappointing. Over the last 12 months, the All Bond Index has gained over 12%, so our decision to have over 20% of the fund allocated to Bonds has helped the performance of the Fund.

We believe the bond market holds the key to the unlocking of value in South African assets. Firstly, lower bonds yields obviously result in attractive returns from bonds, to which we are well exposed. Crucially, lower bond yields will result in a lower cost of equity for South African oriented companies - a lower cost of equity should result in a re-rating of these companies, which for too long have been held back by a cost of capital that is unjustifiably elevated, and in stark contrast to the developed world.

The net result of the above is that the ClucasGray Equilibrium Prescient Fund gained just over 1% in the quarter, ahead of the peer group which declined 1%. Over the last 12 months, the Fund is up 19.2%, compared to peers of 10.9%. As depicted on the fact sheets, the Fund has outperformed its peers over all periods since its inception over 7 years ago. The compound net return of 9.2% since inception is 2.8% per annum ahead of the average balanced fund, and pleasingly for investors, the Fund has outperformed inflation by 4.3% per annum over this period. During the quarter, the Fund continued to be managed in line with its investment objectives.

We were fairly active in the quarter, taking advantage of valuation opportunities that have been presented in good companies that we believe have been unduly sold off. None of us have any insights into how long the conflict will last - we naturally all sincerely hope that sanity prevails and calm is restored soon. Each crisis is different, but history has taught us that crises tend to pass. The reaction of certain commodities and the commensurate performance of certain share prices, is ahead of our assessment of longer term fundamentals. We believe an opportunity has been presented to reduce weightings selectively in some of these companies, and reallocate to areas of the market that have been unduly punished. The Russian Ukraine conflict created a dislocation in the equity market - the spike in Oil on the back of nearer term supply constraints saw a very strong rally in both MTN and Sasol, and presented opportunities in a number of companies that we wanted to take advantage of. We introduced new holdings in Mondi, Foschini and the JSE, and added to our existing holdings in Spar, Anheuser, Old Mutual, FirstRand, Ninety One, Naspers and Reunert.

Notwithstanding a very strong recovery in the share prices of many companies since the lows of 2020, we remain of the view that a combination of a steadily improving earnings backdrop, and historically undemanding valuations will deliver attractive returns to investors. In our view, the very realistic prospect exists for both South African bonds and equities to deliver attractive prospective returns from current levels.

Certainly, the ClucasGray Equilibrium Prescient Fund is well positioned were this to eventuate.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs(TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. A list of fund specific risks is provided below. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

GLOSSARY SUMMARY

Annualised Performance:

Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Returns:

The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV:

The net asset value represents the assets of a Fund less its liabilities.

% Positive Months:

The percentage of months since inception where the Fund has delivered positive return.

Net Performance

Unit trust performance is net (after) management fees have been deducted.
