

FUND OBJECTIVE & STRATEGY

The ClucasGray Future Titans Prescient Fund has a flexible mandate to invest in a range of asset classes but will typically have high exposure to companies outside of the Top 40 Index. The fund is permitted to invest 25% offshore plus an additional 5% in Africa. The primary objective of the fund is to achieve real long-term capital growth ahead of CPI + 6%. The fund looks to acquire fast growing, mispriced, mid-and small-cap shares, "Future Titans", on the back of high conviction fundamental investment calls. The fund has a deep value / activist bias.

FUND INFORMATION

Portfolio Managers:	Brendon Hubbard, James Clucas
Inception Date:	01 September 2009
Fund Size:	R148.3 million
Unit Price:	313.77 cents
ASISA Category:	South African - Multi Asset - Flexible
Benchmark:	CPI Upper Limit
Min Lump Sum:	R20 000
Min monthly investment:	R1 000
Issue Date:	09 May 2022

WHO SHOULD INVEST

The fund is a high risk, high return fund and should be invested in as a complementary investment to any long-term blue-chip portfolio.

RISK INDICATOR

These funds typically exhibit more volatility given their higher exposure to equities and offshore markets where currency fluctuations may result in capital losses. Expected potential long term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

Lowest rolling 1-year return*	-27.1%	6.0%	-13.2%

*Since inception

MONTHLY COMMENTARY

The ClucasGray Future Titans Prescient Fund was down 0.04% for the month against the Flexible Index of negative 0.58% and the Fund is up 28.3% against the Flexible Index of 10.2% for the past 12 months.

The free money party has ended in the USA with a hangover commensurate with the size of the party. The S&P500 was off 10.8% and the Nasdaq off 15.6% for the month. Valuations in the USA remain elevated relative to history and rising rates will further dampen enthusiasm in the near term. Fortunately, valuations in South Africa remain highly attractive and we haven't seen similar levels of sell-offs outside the Chinese tech giants.

Metair was one of the weaker performers for the month as the flood which hit Durban has knocked out the Toyota plant for a few weeks. We estimate the floods will impact earnings by c.6%, fortunately this impact is temporary and does not change the longer-term valuation of the company.

The biggest positive performance was from HCI which was up 23% for the month with the Fund holding a 4.5% weighting. The company invested in several oil and gas prospects many years ago and their partner, Total Energie, finally announced in February the discovery of a 3bn barrel oil find at their prospect off Namibia called Venus-1. News has now leaked from oil and gas consulting group Wood Mackenzie saying the oil discovery could be the largest offshore oil find ever at c.13bn barrels of oil. Attaching a value to HCI's 10% holding in the deep-water field is difficult but using the 5% CNOOC purchase of a similar Brazilian deep-water find would imply a value of this one discovery of R150 to R200 per share. Industry specialists are saying Total will accelerate development of the field with first oil expected in 4 to 5 years. The big decision is what to do with the 6 to 10TCF of gas. Total has a no flare policy which means the gas needs to be either compressed into LNG for export to Europe or to produce electricity for the southern Africa power grid. HCI will start drilling the Gazania well in October this year and we expect news on the gas pricing and offtake agreements from the two large gas deposits off Mossel Bay called Brulpadda and Luiperd. This is just one of several positive near-term catalysts in the ClucasGray Future Titans Prescient Fund portfolio which we believe will drive performance from these levels.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs(TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.
